G<sup>1</sup>  
the ganglioside to an immunogenic protein-based carrier and a carbohydrate derivable [derived] from the bark of a Quillaja saponaria Molina tree, the amounts of such conjugated ganglioside and such carbohydrate being effective to stimulate or enhance antibody production in a subject, and a pharmaceutically acceptable carrier wherein the immunogenic protein-based carrier is Keyhole Limpet Hemocyanin or a derivative thereof.--

G<sup>2</sup>  
--56. (Amended) The composition of claim 53, wherein the immunogenic protein-based carrier is Keyhole Limpet Hemocyanin or a derivative thereof.--

--57. (Amended) The composition of claim 53, wherein the immunogenic protein-based carrier is Keyhole Limpet Hemocyanin.--

G<sup>3</sup>  
--64. (Amended) The composition of claim 53, wherein the molar ratio of the conjugated ganglioside to the immunogenic protein-based carrier is between about 200 and about 1400.--

G<sup>4</sup>  
--65. (2X Amended) A method of stimulating or enhancing antibody production in a subject which comprises administering to the subject an effective amount of a composition comprising a GM2 or GD2 ganglioside conjugated through the ceramide portion of the ganglioside to an immunogenic [protein] protein-based carrier and a carbohydrate derivable [derived] from the bark of a Quillaja saponaria Molina tree, the amounts of such conjugated ganglioside and such carbohydrate being effective to stimulate or enhance antibody production in a subject, and a pharmaceutically acceptable carrier.--
